login to ubuntu(Linux) system as root user:

```
sudo su -
```

//It will prompt for password, provide the same password of ubuntu server

2. check the git version

```
git --version
```

3. set the global parameter

```
git config --global user.name "<your-firstname> <your-lastname>"

git config --global user.email "<your-email@address>"
```

EXAMPLES:

```
git config --global user.name "amit"

git config --global user.email "amit@ow.com"

git config --global --list
```

Create and initialize a local Git repo

```
mkdir my-repo
```

 #Change into the new directory

```
cd my-repo
```

#Check the current git status of the new directory

```
git status
```

#Initialize the directory as a git-enabled

```
git init

ls -al

git status
```
